

Agglomerate marking MultiDotLine[®]-Plus

Profiled thermoplastic markings consisting of a thin plain basic line *plus* regular agglomerates on top ...

...can be applied in one pass with this new system of HOFMANN!

This system consists of two extruders: One MultiDotLine[®]-Extruder and one plain line extruder, whereby the second extruder can be mounted afterwards and can also be dismantled at any time.

Each extruder has its own worm pump with its own controllable hydraulic drive. Thus, you can control the basic line and the dots separately resulting in an easy adjustability and better reproducibility.
